

# Brief: Code a responsive website

## RESPONSIVE LAYOUTS SIZES

- 1 Phone layout 320px width
- 2 Tablet layout 768px width
- 3 Desktop layout 1200px width

### 1. Finished HTML and CSS for the phone layout only

- Submit one zipped web folder
- No media queries are needed at this stage

### 2. Finished HTML and CSS for the three layouts (zipped)

Start with the provided root folder!

- Use the HTML5 tags (where applicable)
- Add CSS3 to create interest and interaction within the site
- Media Queries used to managed CSS based on the screen size
- Include "best practices" for SEO (page title, meta tags, alt tags, choice of tags, naming conventions, etc)
- Navigation: mobile menu is required
- Folder structure must be well organized, files must be named correctly.
- Final Image Assets: Must be exported/compress correctly, and in the correct file format.
